

THE GOAL To Take A Picture Which Shows the Splendour of Autumn Colours using the Panasonic Lumix FZ200

How To Do It Set the camera to A (Aperture Priority mode) by turning the top mode dial, use the back control wheel to dial in an aperture of F4 .

ISO should be set to the minimum the camera supports – ISO 100. Image stabiliser should be on.

Set the focus to AF on the side of the camera, set AF Style to AFS and AF Area to SINGLE and leave the default size and position. Set Metering mode to Centre weighted. Set Photostyle to Vivid and increase saturation to +2 (you should be using sharpness +1 and noise reduction -2 as my basic camera default setting). Set white balance to CLOUDY. This will give richly saturated colours and the cloudy white balance adds extra warmth to the reds and golds
